

Una introducción a la caja de herramientas DUNE Numerics para la solución de modelos matemáticos

Webinar 13 de Julio de 2021

Elaborado por:
John Jairo Leal Gómez
Universidad Nacional de Colombia
Carlos Alonso Aznarán Laos
Universidad Nacional de Ingeniería, Perú

Presentación del libro

Las matemáticas en la vida real Introducción básica al modelamiento matemático

John Jairo Leal Gómez / Juan Pablo Cardona Guío

Dirección de Investigación y Extensión
Vicerrectoría
Sede Palmira

CAPÍTULOS:

1. Introducción a los números reales \mathbb{R} .
2. Introducción a las funciones.
3. La derivada.
4. Modelamiento matemático.
5. Anexos.

Serie CIENCIAS BÁSICAS

Presentación del libro

4.3 Situaciones cotidianas

En primer lugar, se muestran “expresiones” de situaciones cotidianas con sus respectivas representaciones como funciones y sus derivadas.

4.3.1 Encender la luz

Figura 4.3.
Encender la luz

La acción de encender la luz, como en la figura 4.3, se puede escribir matemáticamente como el cambio en la posición del *switch* P como variable independiente o causa del fenómeno, y el efecto se puede ver en el cambio de la intensidad lumínica I . Esto quiere decir que la intensidad lumínica es una función de la posición del *switch* $I(P)$. La variación se puede escribir como:

$$\frac{dI}{dP}$$

4.1

DUNE Numerics Project

Distributed and Unified Numerics Environment (DUNE)

- ▶ Software de **código abierto** bajo la licencia GNU General Public Licence 2  Free as in Freedom.
- ▶ Disponible en macOS, Debian , Ubuntu , openSUSE , **Arch Linux**  y FreeBSD .
- ▶ Conjunto de **bibliotecas de plantillas** en  moderno con enlaces a .
- ▶ **Implementación eficiente** de las estructuras de datos y los algoritmos en interfaces abstractas.
- ▶ Para la resolución numérica de **ecuaciones diferenciales parciales** e implementación de esquemas basados en mallas, por ejemplo, *diferencias finitas*, *elementos finitos* o *volúmenes finitos*.

Origen: <https://dune-project.org/about/dune>.

Figura: Los binarios están disponible en el repositorio **Arch Linux for Education** (Jingbei Li, Carlos Aznarán y otros, octubre 2022).

DUNE Numerics Project

Proyectos que emplean DUNE

EI DUNE verso: módulos

<https://dune-project.org/groups/core>

Origen: <https://gitlab.com/dune-archiso/repository/dune-archiso-repository-pdelab-git/-/pipelines>.

dune-common Clases fundamentales e infraestructura para la construcción del sistema.

dune-geometry Elementos de referencia, métodos de cuadraturas y transformaciones geométricas.

dune-grid Interfaces con las mallas (ALUGrid, UGGrid, AlbertaGrid, YaspGrid).

dune-istl Biblioteca de plantillas para solucionadores iterativos, clases genéricas de matrices/vectores dispersos.

dune-localfunctions Interface genérica para funciones de elementos finitos.

El DUNE verso: módulos

Dependencias de algunos módulos

dune-fem

- dune-alugrid
- dune-istl
- dune-localfunctions
- python-fenics-ufl
- python-matplotlib
- python-scipy
- dune-polygongrid (opcional)
- dune-spgrid (opcional)
- eigen (opcional)
- papi (opcional)

opm-models

- dune-alugrid
- dune-localfunctions
- opm-grid
 - opm-common
 - suitesparse
 - zoltan
- dune-fem (opcional)

dumux

- dune-grid
- dune-istl
- dune-localfunctions
- dune-alugrid (opcional)
- dune-foamgrid (opcional)
- dune-functions (opcional)
- dune-mmesh (opcional)
- dune-spgrid (opcional)
- dune-subgrid (opcional)
- opm-grid (opcional)

dune-pdelab

- arpack++
- dune-alugrid
- dune-functions
- suitesparse
- superlu
- dune-multidomaingrid (opcional)

INFORMATION AND RESOURCES

Information for C++ Developers

```
[1]: from ufl import *
    from dune.ufl import Constant, DirichletBC
    import dune.ufl
    import dune.geometry as geometry
    import dune.fem as fem
    from dune.fem.plotting import plotPointData as plot
    import matplotlib.pyplot as pyplot
```

set up polynomial order and radius of reference surface

```
[2]: order = 2
    R0 = 2.
```

We begin by setting up reference domain Γ_0 (`grid`), and the space on Γ_0 that describes $\Gamma(t)$ (`space`). From this we interpolate the non-spherical initial surface `positions` , and, then reconstruct `space` for the discrete solution on $\Gamma(t)$.

```
[3]: from dune.fem.view import geometryGridView
    from dune.fem.space import lagrange as solutionSpace
    from dune.alugrid import aluConformGrid as leafGridView
    gridView = leafGridView("sphere.dgf", dimgrid=2, dimworld=3)
    space = solutionSpace(gridView, dimRange=gridView.dimWorld, order=order)
    u = TrialFunction(space)
    v = TestFunction(space)
    x = SpatialCoordinate(space)
    # positions = space.interpolate(x * (1 + 0.5*sin(2*pi*x[0]*x[1])* cos(pi*x[2])), name="posi
    positions = space.interpolate(x * (1 + 0.5*sin(2*pi*(x[0]+x[1]))*cos(0.25*pi*x[2])), name="
    surface = geometryGridView(positions)
    space = solutionSpace(surface, dimRange=surface.dimWorld, order=order)
    solution = space.interpolate(x, name="solution")

GridParameterBlock: Parameter 'bisectioncompatibility' not specified, defaulting to '0' (fa
```

Finite Elements

As another example, we solve the Poisson equation

$$\begin{aligned} -\Delta u &= f && \text{in } \Omega \\ u &= 0 && \text{in } \partial\Omega \end{aligned}$$

in Python based on a simplicial Dune grid: `ALUConformGrid`.

```
[1]: import numpy as np
    from dune.grid import cartesianDomain, gridFunction
    from dune.alugrid import aluConformGrid

[2]: vertices = np.array([(0, 0), (1, 0), (1, 1), (0, 1),
                        (-1, 1), (-1, 0), (-1, -1), (0, -1)])
    triangles = np.array([(2, 0, 1), (0, 2, 3), (4, 0, 3),
                        (0, 4, 5), (6, 0, 5), (0, 6, 7)])

[3]: aluView = aluConformGrid({"vertices": vertices, "simplices": triangles})
    aluView.hierarchicalGrid.globalRefine(2)
```

This is a live USB containing a full operating system that can be booted, this means that you can use a USB stick to burn this image or virtualize it to Linux-KVM, QEMU, Virtualbox, VMWare, Hyper-V. We included the following repositories:

- Arch Linux Core [Official]
- Arch Linux Extra [Official]
- Arch Linux Community [Official]
- Arch Linux Multilib [Official]
- Arch4Edu [Third-party]
- Cyber [Third-party]
- Dune-archiso-repository-core [Third-party]
- Dune-archiso-repository-extra [Third-party]

In addition, we provide the packages of some modules of DUNE Numerics (version 2.7.1), DuMux (version 3.4) and the Open Porous Media (version 2021.04). The full list of packages is described in <https://dune-archiso.gitlab.io/packages>

Enjoy. I don't belong to dune-project. All the blame falls on me (github.com/carlosal1015).

Recommended Projects

Arm Mbed OS
Platform operating system designed for the Internet of...

Apache OpenOffice
