

# Una introducción a la caja de herramientas DUNE Numerics para la solución de modelos matemáticos

Webinar 13 de Julio de 2021

Elaborado por:  
John Jairo Leal Gómez  
Universidad Nacional de Colombia  
Carlos Alonso Aznarán Laos  
Universidad Nacional de Ingeniería, Perú

# Las matemáticas en la vida real

## Introducción básica al modelamiento matemático

John Jairo Leal Gómez / Juan Pablo Cardona Guío

Dirección de Investigación y Extensión  
Vicerrectoría  
Sede Palmira

UNIVERSIDAD  
NACIONAL  
DE COLOMBIA

### CAPÍTULOS:

1. Introducción a los números reales  $\mathbb{R}$ .
2. Introducción a las funciones.
3. La derivada.
4. Modelamiento matemático.
5. Anexos.

### 4.3 Situaciones cotidianas

En primer lugar, se muestran “expresiones” de situaciones cotidianas con sus respectivas representaciones como funciones y sus derivadas.

#### 4.3.1 Encender la luz

Figura 4.3.  
Encender la luz

La acción de encender la luz, como en la figura 4.3, se puede escribir matemáticamente como el cambio en la posición del *switch*  $P$  como variable independiente o causa del fenómeno, y el efecto se puede ver en el cambio de la intensidad lumínica  $I$ . Esto quiere decir que la intensidad lumínica es una función de la posición del *switch*  $I(P)$ . La variación se puede escribir como:

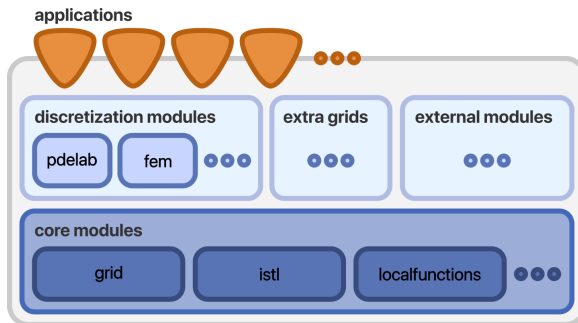

$$\frac{dI}{dP}$$

4.1

## Distributed and Unified Numerics Environment (DUNE)

- ▶ Software de código abierto bajo la licencia GNU General Public Licence 2  Free as in Freedom.
- ▶ Disponible en macOS, Debian , Ubuntu , openSUSE , Arch Linux  y FreeBSD .
- ▶ Conjunto de bibliotecas C++ con enlaces a Python.
- ▶ Utilizado en la resolución de ecuaciones diferenciales parciales e implementación de métodos basados en mallas, por ejemplo diferencias finitas, elementos finitos o volúmenes finitos.

**Figura:** Tomado de <https://dune-project.org>.

## Proyectos que emplean DUNE

- ▶ <https://dune-project.org/about/dune>
- ▶ <https://dumux.org>
- ▶ <https://opm-project.org>
- ▶ <https://precice.org>
- ▶ <https://www.zib.de/projects/kaskade7-finite-element-toolbox>

**Figura:** Tomado de <https://dune-project.org>.

**Figura:** Tomado de

<https://gitlab.com/dune-archiso/repository/dune-archiso-repository-pdelab-git/-/pipelines>

**dune-common** Clases fundamentales e infraestructura para la construcción del sistema.

**dune-geometry** Elementos de referencia, métodos de cuadraturas y transformaciones geométricas.

**dune-grid** Interfaces con las mallas (ALUGrid, UGGrid, AlbertaGrid, YaspGrid), construcción y visualización.

**dune-istl** Biblioteca de solucionadores iterativas de plantillas, clases genéricas de matrices/vectores dispersos, solucionadores

**dune-localfunctions** Interface genérica para funciones de elementos finitos.

## INFORMATION AND RESOURCES

Information for C++ Developers

How to showcase your own project

Notebooks and Scripts

Mesh Files used in the Examples

Citing this project

List of things that need doing...

```
[1]: import matplotlib
      matplotlib.rc( 'image', cmap='jet' )
      import math

      from ufl import *
      from dune.ufl import Constant, DirichletBC
      import dune.ufl
      import dune.geometry as geometry
      import dune.fem as fem
      from dune.fem.plotting import plotPointData as plot
      import matplotlib.pyplot as pyplot
```

set up polynomial order and radius of reference surface

```
[2]: order = 2
      R0 = 2.
```

We begin by setting up reference domain  $\Gamma_0$  (`grid`), and the space on  $\Gamma_0$  that describes  $\Gamma(t)$  (`space`). From this we interpolate the non-spherical initial surface `positions`, and, then reconstruct `space` for the discrete solution on  $\Gamma(t)$ .

grid construction; dune grid format file

```
[3]: from dune.fem.view import geometryGridView
      from dune.fem.space import lagrange as solutionSpace
      from dune.alugrid import aluConformGrid as leafGridView
```

## Finite Elements

As another example we solve the poisson equation

$$\begin{aligned} -\Delta u &= f && \text{in } \Omega, \\ u &= 0 && \text{auf } \partial\Omega \end{aligned}$$

in Python based on a simplicial Dune grid: `ALUConformGrid`.

```
In [2]: import time
import numpy
import math
```

Como primer paso construimos la grilla

```
In [3]: from dune.grid import cartesianDomain, gridFunction
from dune.alugrid import aluConformGrid
vertices = numpy.array([(0,0), (1,0), (1,1), (0,1), (-1,1), (-1,0), (-1,-1), (0,-1)])
triangles = numpy.array([(2,0,1), (0,2,3), (4,0,3), (0,4,5), (6,0,5), (0,6,7)])
aluView = aluConformGrid({"vertices": vertices, "simplices": triangles})
aluView.hierarchicalGrid.globalRefine(7)
```

This is a live USB containing a full operating system that can be booted, this means that you can use a USB stick to burn this image or virtualize it to Linux-KVM, QEMU, Virtualbox, VMWare, Hyper-V. We included the following repositories:

- Arch Linux Core [Official]
- Arch Linux Extra [Official]
- Arch Linux Community [Official]
- Arch Linux Multilib [Official]
- Arch4Edu [Third-party]
- Cyber [Third-party]
- Dune-archiso-repository-core [Third-party]
- Dune-archiso-repository-extra [Third-party]

In addition, we provide the packages of some modules of DUNE Numerics (version 2.7.1), DuMux (version 3.4) and the Open Porous Media (version 2021.04). The full list of packages is described in <https://dune-archiso.gitlab.io/packages>

Enjoy. I don't belong to dune-project. All the blame falls on me ([github.com/carlosal1015](https://github.com/carlosal1015)).

## Recommended Projects

**Arm Mbed OS**  
Platform operating system designed for the Internet of...

**Apache OpenOffice**  
The free and Open Source productivity suite

**KeePass**  
A lightweight and easy-to-use password manager

**Clonezilla**  
A partition and disk imaging/cloning program

**7-Zip**  
A free file archiver for extremely high compression
