

# Una introducción a la caja de herramientas DUNE Numerics para la solución de modelos matemáticos

Webinar 13 de Julio de 2021

Elaborado por:  
John Jairo Leal Gómez  
Universidad Nacional de Colombia  
Carlos Alonso Aznarán Laos  
Universidad Nacional de Ingeniería, Perú

# Presentación del libro

## Las matemáticas en la vida real Introducción básica al modelamiento matemático

John Jairo Leal Gómez / Juan Pablo Cardona Guío

Dirección de Investigación y Extensión  
Vicerrectoría  
Sede Palmira

### CAPÍTULOS:

1. Introducción a los números reales  $\mathbb{R}$ .
2. Introducción a las funciones.
3. La derivada.
4. Modelamiento matemático.
5. Anexos.

**Serie CIENCIAS BÁSICAS**

# Presentación del libro

## 4.3 Situaciones cotidianas

En primer lugar, se muestran “expresiones” de situaciones cotidianas con sus respectivas representaciones como funciones y sus derivadas.

### 4.3.1 Encender la luz

Figura 4.3.  
Encender la luz

La acción de encender la luz, como en la figura 4.3, se puede escribir matemáticamente como el cambio en la posición del switch  $P$  como variable independiente o causa del fenómeno, y el efecto se puede ver en el cambio de la intensidad lumínica  $I$ . Esto quiere decir que la intensidad lumínica es una función de la posición del switch  $I(P)$ . La variación se puede escribir como:

$$\frac{dI}{dP}$$

4.1

# DUNE Numerics Project

## Introducción

### Distributed and Unified Numerics Environment (DUNE)

- ▶ Software de código abierto bajo la licencia GNU General Public Licence 2  Free as in Freedom.
- ▶ Disponible en macOS, Debian , Ubuntu , openSUSE , Arch Linux  y FreeBSD .
- ▶ Conjunto de bibliotecas C++ con enlaces a Python.
- ▶ Utilizado en la resolución de ecuaciones diferenciales parciales e implementación de métodos basados en mallas, por ejemplo diferencias finitas, elementos finitos o volúmenes finitos.

**Figura:** Tomado de <https://dune-project.org>.

### Proyectos que emplean DUNE

- ▶ <https://dune-project.org/about/dune>
- ▶ <https://dumux.org>
- ▶ <https://opm-project.org>
- ▶ <https://precice.org>
- ▶ <https://www.zib.de/projects/kaskade7-finite-element-toolbox>

**Figura:** Tomado de <https://dune-project.org>.

# EI DUNE verso: módulos

<https://dune-project.org/groups/core>

**Figura:** Tomado de

<https://gitlab.com/dune-archiso/repository/dune-archiso-repository-pdelab-git/-/pipelines>

**dune-common** Clases fundamentales e infraestructura para la construcción del sistema.

**dune-geometry** Elementos de referencia, métodos de cuadraturas y transformaciones geométricas.

**dune-grid** Interfaces con las mallas (ALUGrid, UGGrid, AlbertaGrid, YaspGrid), construcción y visualización.

**dune-istl** Biblioteca de solucionadores iterativos de plantillas, clases genéricas de matrices/vectores dispersos, solucionadores

**dune-localfunctions** Interface genérica para funciones de elementos finitos.

# El DUNE verso: módulos

## Dependencias de algunos módulos

dune-fem

dumux

opm-upscaling

opm-models

Mesh Files used in the Examples

Citing this project

List of things that need doing...

```
[1]: import matplotlib
matplotlib.rc( 'image', cmap='jet' )
import math

from ufl import *
from dune.ufl import Constant, DirichletBC
import dune.ufl
import dune.geometry as geometry
import dune.fem as fem
from dune.fem.plotting import plotPointData as plot
import matplotlib.pyplot as pyplot
```

set up polynomial order and radius of reference surface

```
[2]: order = 2
R0 = 2.
```

We begin by setting up reference domain  $\Gamma_0$  (`grid`), and the space on  $\Gamma_0$  that describes  $\Gamma(t)$  (`space`). From this we interpolate the non-spherical initial surface `positions`, and, then reconstruct `space` for the discrete solution on  $\Gamma(t)$ .

grid construction; dune grid format file

```
[3]: from dune.fem.view import geometryGridView
from dune.fem.space import lagrange as solutionSpace
from dune.alugrid import aluConformGrid as leafGridView
```

## Finite Elements

As another example we solve the poisson equation

$$\begin{aligned} -\Delta u &= f && \text{in } \Omega, \\ u &= 0 && \text{auf } \partial\Omega \end{aligned}$$

in Python based on a simplicial Dune grid: `ALUConformGrid`.

```
In [2]: import time
import numpy
import math
```

Como primer paso construimos la grilla

```
In [3]: from dune.grid import cartesianDomain, gridFunction
from dune.alugrid import aluConformGrid
vertices = numpy.array([(0,0), (1,0), (1,1), (0,1), (-1,1), (-1,0), (-1,-1), (0,-1)])
triangles = numpy.array([(2,0,1), (0,2,3), (4,0,3), (0,4,5), (6,0,5), (0,6,7)])
aluView = aluConformGrid({"vertices": vertices, "simplices": triangles})
aluView.hierarchicalGrid.globalRefine(7)
```

This is a live USB containing a full operating system that can be booted, this means that you can use a USB stick to burn this image or virtualize it to Linux-KVM, QEMU, Virtualbox, VMWare, Hyper-V. We included the following repositories:

- Arch Linux Core [Official]
- Arch Linux Extra [Official]
- Arch Linux Community [Official]
- Arch Linux Multilib [Official]
- Arch4Edu [Third-party]
- Cyber [Third-party]
- Dune-archiso-repository-core [Third-party]
- Dune-archiso-repository-extra [Third-party]

In addition, we provide the packages of some modules of DUNE Numerics (version 2.7.1), DuMux (version 3.4) and the Open Porous Media (version 2021.04). The full list of packages is described in <https://dune-archiso.gitlab.io/packages>

Enjoy. I don't belong to dune-project. All the blame falls on me ([github.com/carlosal1015](https://github.com/carlosal1015)).

## Recommended Projects

**Arm Mbed OS**  
Platform operating system designed for the Internet of...

**Apache OpenOffice**  
The free and Open Source productivity suite

**KeePass**  
A lightweight and easy-to-use password manager

**Clonezilla**  
A partition and disk imaging/cloning program

**7-Zip**  
A free file archiver for extremely high compression
